

## TECTANE NEW MASTER PLAN:

Following several new developments Worldwide, Tectane has designed and formed a New Master Plan, to address the new realities of the Ethanol Development Market and new Technologies in the field.

The latest reports indicate that due to the Climate Crisis, Countries Worldwide is suffering from droughts and floods. China lost over 25 million acres to droughts recently. Other Countries have had record floods and poor crops. Acknowledging that these happenings are all part of the U.N. Predictions on Climate Change and predicted to become even worst, Tectane has formed a Partnership with a Company that addresses emissions with a LIQUID MUFFLER (EnviroPure Industries) that reduces emissions up to 96%. This solution is an immediate solution, without the need to change fuels. This Company looks at Tectane to increase engine efficiency, while they reduce the emissions. Together we provide the ideal situation. Next comes the reality that growing crops replaces land for the production of food crops. This reality has been officially recorded with the U.N. and the Major Groups of the World. Nevertheless, the strength of the existing Corporations in the field, have overcome reality with Special Interest Political Power. The fact that a Company in Brazil has been able to execute a \$1.2 Billion Ethanol I.P.O. on the Stock Market, demonstrates this Power, not to mention Giant U.S. Companies like A.D.M., will continue to influence Political Policies, with major financial contributions. Tectane on the other hand will continue to offer Agricultural Sweet Sorghum Projects, in Developing Countries, seeking Employment, Fuel Independence, Food and By Products to the cutting of Trees. Tectane's new patents (pending) for the Co-generation of the Production and Conversion of said fuels, will offer a Cost Efficient Exclusive Plan to Developing Countries and the Stock Exchange.

The combination of the ideal Technology Partnership and Technologies will make Tectane one of the most STOCK SUSTAINABLE Companies that could be placed on the Major Stock Exchanges Worldwide. Our Pending Partner has agreed to a 10% exchange of Equity. Since their technology is immediately available, they have received Investment offers from the Major Investment Groups, Billionaires and Car Companies of the World. Our Partnership with them will help us enter a New World and Stock Value.
